WHITEPAPER · VERSION 1.2 · OCTOBER 2026

CuteDoDo

$DODO Whitepaper

Stay cute. Stay united. Build together.

A community-first, pet-loving meme token on Solana, inspired by Dodo, a real Shih Tzu, with 1.15% of supply set aside for pet charity.

GRADUATED FROM PUMP.FUN TO PUMPSWAP

CONTRACT ADDRESS (SOLANA)

OVERVIEW

CuteDoDo at a glance

CuteDoDo $DODO is a community-driven meme token on Solana. It is built around a real dog, open communication and a simple promise: grow the community first, give back to pets, and be honest about what is done and what is only planned.

KEY FACTS

Project and token	CuteDoDo ($DODO)
Blockchain	Solana (SPL token)
Total supply	1,000,000,000 $DODO (fixed; mint authority disabled)
Launch	18 Oct 2026 on pump.fun, using the Smithii bundler tool (disclosed in sections 3 and 4)
Status	**Graduated** to PumpSwap on 26 Oct 2026
Charity	1.15% of total supply set aside for pet charity
Transfer tax	None (0% marketing tax)
Website	cutedodo.com

Contents

3 · Tokenomics and supply
4 · Launch and liquidity
5 · Community and growth
6 · Pet charity
7 · Our pledges
8 · Roadmap
9 · Security and risks
10 · Official channels

How to read this paper

Figures marked with a date are snapshots from public sources such as Solscan and TokenSniffer, and they change over time.

Roadmap items are labelled Completed, In progress or Planned. A milestone counts as complete only once the work has actually been delivered.

What is new in v1.2

v1.2: tokenomics updated; launch method and team-linked holdings disclosed (sections 3, 4, 8, 9).

v1.1: $DODO graduated to PumpSwap.

Meet Dodo

Dodo is a real Shih Tzu from Chennai, India, and the face of CuteDoDo.

The project started from a simple idea: a meme token should have a real character behind it, and a real purpose. Dodo gives the community a friendly mascot that people around the world can relate to, because almost everyone has a pet, or loves one.

CuteDoDo uses internet culture, playful memes and creative content to bring pet lovers together on Solana. Part of what the community builds is set aside for animals who need help.

Pet lovers do not need to hold the token to be part of the family. Anyone who enjoys watching the community grow and the good it does is welcome.

Vision

A recognisable, trusted, pet-loving brand in the Solana ecosystem, with a community of pet lovers in every country.

Mission

Grow through shared identity, creativity, participation and honest updates, and give back to pets along the way.

Community first

The community leads. The token grows naturally behind it, not the other way round.

Verified token information

Always check token details against on-chain records and CuteDoDo's official channels before making any transaction.

TOKEN DETAILS

Name	CuteDoDo
Ticker	$DODO
Blockchain	Solana
Token standard	SPL token
Contract address	`2e5bKRHpAixvgE6zUdTf7rigxCq662zq7xvN8Dympump`
Total supply	1,000,000,000 $DODO (6 decimals, so Solscan shows 999,999,999.999999)
Mint authority	Disabled (no new tokens can be created), per TokenSniffer scan
Freeze authority	Disabled (wallets cannot be frozen), per TokenSniffer scan
Launch platform	pump.fun, launched 18 Oct 2026 (now graduated to PumpSwap)
Utility	Community participation, community rewards and any future initiatives that are officially announced

How to verify

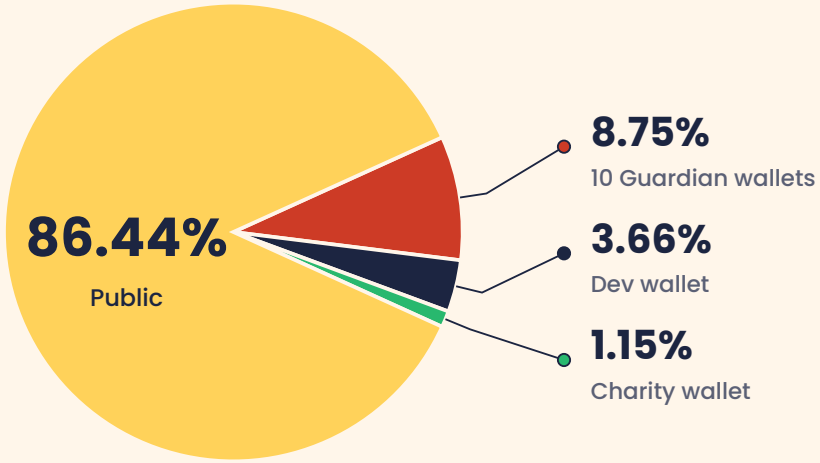

- Search the contract address on Solscan.
- Check that the name, symbol and supply match this paper.
- Take links only from cutedodo.com.

Beware of fakes

Anyone can copy a name or a logo. Only the contract address above is the real $DODO. The team will never ask for your seed phrase or private keys.

Who holds what

Total supply is fixed at 1,000,000,000 $DODO and mint authority is disabled, so no new tokens can ever be created. There is no marketing or transfer tax. This is exactly how the supply is distributed.

ALLOCATION	SHARE	TOKENS
Public, pump.fun bonding curve	**86.44%**	864,400,000
10 Guardian wallets (together)	**8.75%**	87,500,000
Dev wallet	**3.66%**	36,600,000
Charity wallet	**1.15%**	11,500,000
Total	**100.00%**	**1,000,000,000**

Launch method. $DODO was created on pump.fun using the Smithii pump.fun bundler tool. The dev wallet, the 10 Guardian wallets and the charity wallet are disclosed above, and their addresses are published on cutedodo.com.

SUPPLY PRINCIPLES

Fixed supply	The total supply is 1,000,000,000 $DODO. Mint authority is disabled, so the supply can never be increased.
Charity reserve	1.15% of total supply (11,500,000 $DODO) is set aside for pet charity in a public wallet. See section 6.
Team wallets	The dev wallet holds 3.66% and the 10 Guardian wallets hold 8.75% together. Verify balances on Solscan.

Percentages are the project's figures and change if wallets buy, sell or move tokens, so verify them on-chain. $DODO is a meme token. It has no promised yield, no revenue share and no claim on any asset. Its value depends on market demand alone.

Graduated: from bonding curve to open market

$DODO started on pump.fun's bonding curve. The curve has now reached 100%, the token has graduated, and liquidity moves to pump.fun's own exchange, PumpSwap.

1. **Bonding curve** DONE
   $DODO launched on 18 October 2026 using the Smithii bundler tool, then buyers and sellers traded against the curve. The price moved with demand, and the curve filled as more people bought.
2. **Graduation at 100%** DONE
   The curve is full and $DODO has graduated. This is a standard pump.fun milestone that every token on the platform can reach.
3. **PumpSwap liquidity** LIVE
   After graduation, liquidity migrates to PumpSwap, pump.fun's native decentralised exchange, where $DODO trades in an open pool.

Bonding curve progress **100% · Graduated**

Graduated on 26 October 2026 (the earlier snapshot that day showed 97%). Check pump.fun and PumpSwap for current figures.

Timeline

18 Oct 2026 · Launch on pump.fun (Smithii bundler tool), project wallets disclosed

25 Oct 2026 · Bonding curve at 83%

26 Oct 2026 · Bonding curve at 97%, then complete: graduation to PumpSwap

Liquidity

TokenSniffer reported liquidity as burned or locked (100%) in its pre-graduation scan of 25-26 October 2026. Liquidity now sits in the PumpSwap pool. The project will publish confirmation of where the liquidity position is held, so check it on-chain rather than relying on this paper.

What we do not promise

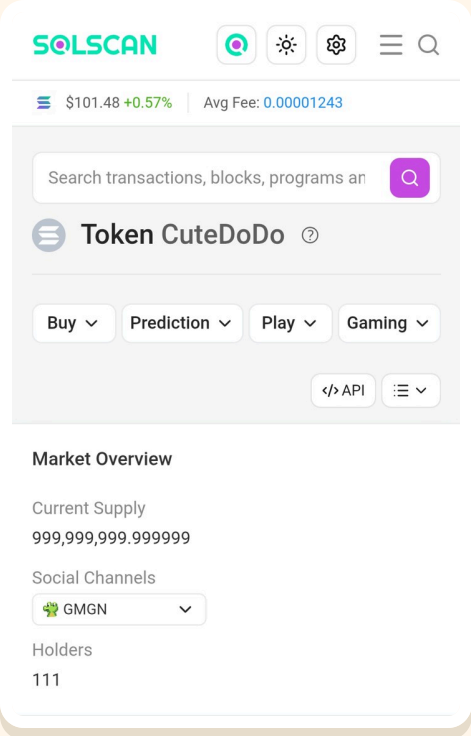

Graduation does not guarantee a price, a trading volume or any exchange or data-site listing. Graduation is a market event, and the project does not control what the market does next.

A pack that keeps growing

Growing organically

CuteDoDo grows through real people and real conversation, with no paid promotion. Members invite friends and family, share memes and help each other.

Community programmes

- **Airdrop programme:** rewards for active, supportive members. There is no time limit, so being active and bringing pet friends keeps you eligible.
- **Referral programme:** members who bring pet lovers into the community are recognised with a referral ID and a referral airdrop.
- **AMA sessions:** open Q&A with the team in the community chat.
- **Milestone goals:** shared community goals such as the next member milestone, announced openly.

Participation does not guarantee rewards. Programme rules may change and are announced in official channels. Member and holder counts change daily, so check Telegram and Solscan for current numbers.

Open to pet lovers everywhere

The goal is a community of pet lovers from every country. People who never buy the token are still part of the family when they follow along, enjoy the content and cheer on the good the community does.

1.15% for pets, in the open

1.15% of the total $DODO supply (11,500,000 $DODO) is set aside for pet charity, and the reserve is listed publicly on cutedodo.com so anyone can check it.

Why pets

Dodo is a real dog, and CuteDoDo is built by and for pet lovers. Stray and abandoned animals need food, shelter and medical care, so helping them is the natural purpose for a pet-themed community.

How the charity reserve works

1. **Set aside.** The 1.15% reserve is held in a public wallet shown on cutedodo.com.
2. **Choose recipients.** Pet shelters and rescue organisations are chosen with input from the community.
3. **Give.** Donations are made as the community grows and the reserve can be put to use.
4. **Show the proof.** Each donation is reported to the community with receipts or transaction links.

Honest by design. The size of any donation depends on the market and the community's growth. The project will name each recipient and report each donation only after it has been made.

The CuteDoDo Promise

These are the commitments the CuteDoDo team makes to the community.

PLEDGE	WHAT IT MEANS
1 · Community first	Decisions start with the community. Pet lovers from every country are welcome.
2 · No rug	The team will not abandon the project or the community.
3 · No sell	The team is here to build, not to dump on the pack.
4 · Full transparency	A real dog, an open team and honest updates. Wallets, charity and progress are shared publicly.
5 · 1.15% for pet charity	1.15% of supply is set aside for pets and listed publicly.

Communication

Updates are posted in the official Telegram, X and Discord channels and on cutedodo.com. The team separates what is delivered from what is only planned.

Governance

CuteDoDo is led by the founding Dodo family with community volunteers. Members can suggest ideas and vote informally in community chats. $DODO carries no formal governance rights.

A note on pledges. These are voluntary commitments by the project team. They are not legal guarantees, and the community is encouraged to check wallet activity on Solscan at any time.

Five phases, step by step

Milestones are counted as complete only after the work has been delivered. Everything not marked Completed remains a plan.

Phase 1 · Foundation COMPLETED

- Brand identity for CuteDoDo and Dodo
- Official website and community channels (Telegram, X, Discord)
- Verified token information and contract address published
- Independent security scan with a 100/100 TokenSniffer score
- Launch method and all Guardian wallets, the dev wallet and the charity wallet published on cutedodo.com
- **Bonding curve completion and graduation to PumpSwap** NEW · COMPLETED

Phase 2 · Community expansion IN PROGRESS

- Grow the Telegram community (250 members so far, with 300 as the next goal)
- Airdrop and referral programmes, AMA sessions and milestone celebrations
- Publish confirmation of where the PumpSwap liquidity position is held
- Prepare applications to market-data sites such as CoinGecko and CoinMarketCap, subject to their approval
- Meme contests and community content

Phase 3 · Brand development PLANNED

- Original CuteDoDo content and storytelling around Dodo
- Collaborations with relevant creators and pet communities
- First charity donations from the 1.15% reserve, reported with proof
- Evaluate digital collectibles or merchandise

Phase 4 · Ecosystem PLANNED

- Assess community-focused features
- Explore NFT or collectible ideas
- Review each idea against community feedback and resources

Phase 5 · Long-term PLANNED

- Build international awareness
- Explore relevant ecosystem integrations
- Report progress and changes openly

Plans depend on project resources, community participation and market conditions. Listings and partnerships are goals, not promises.

What the scan shows, and what to know

TokenSniffer scan, 25–26 October 2026 (before graduation) **100/100**

- ✓ No sniping at initial mint
- ✓ No suspect trading groups
- ✓ Mint authorization disabled
- ✓ Freeze authorization disabled
- ✓ Creator holds under 5% of supply
- ✓ Top 10 holders under 70% of supply
- ✓ Liquidity burned or locked (100%)
- ✓ Transfer fee disabled

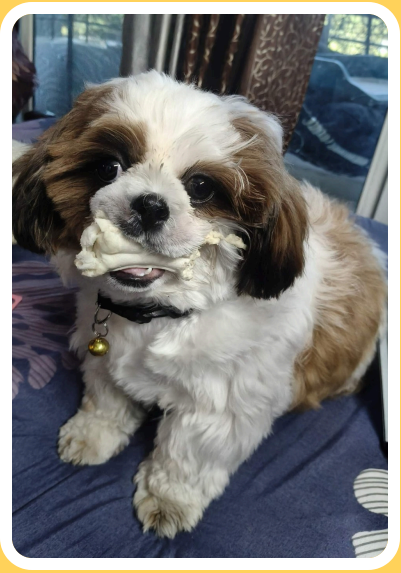

TokenSniffer is an automated scan, not a guarantee. This scan was run before graduation, so results can change after the move to PumpSwap. It does not replace the launch disclosure in sections 3 and 4, where the bundler launch and team-linked wallets are listed. Re-check everything yourself.

Risks

- **Market risk:** meme tokens are volatile and can lose most or all of their value quickly.
- **Concentration risk:** the 10 Guardian wallets hold 8.75% of supply and the dev wallet 3.66%. Sales by large holders can move the price sharply.
- **Liquidity risk:** thin liquidity can make it hard to buy or sell at a fair price.
- **Platform and smart-contract risk:** pump.fun, PumpSwap and Solana can have bugs, outages or rule changes.
- **Bots and manipulation:** automated trading can move prices sharply, especially in small markets.
- **Impersonation and scams:** fake tokens, fake accounts and fake giveaways exist, and they often appear right after a graduation. Verify the contract address.
- **Regulatory risk:** rules for crypto assets differ by country and may change.
- **No guarantees:** the project does not guarantee profit, price rises, liquidity, exchange or data-site listings, or future utility.

Disclaimer. This document is for information only. It is not financial, investment, legal or tax advice, and it is not an offer or solicitation to buy any asset. $DODO is a meme token with no intrinsic value or promised return. Only spend what you can afford to lose and do your own research.
